

**(54) ENVIRONMENTAL RESISTANT STEP INDEX TYPE OPTICAL FIBER**

(11) 1-107217 (A) (43) 25.4.1989 (19) JP  
 (21) Appl. No. 62-263945 (22) 21.10.1987  
 (71) SUMITOMO ELECTRIC IND LTD (72) MASAMOTO OOE(2)  
 (51) Int. Cl. G02B6/16, G02B6/00

**PURPOSE:** To obtain a step index type optical fiber having excellent radiation resistance by incorporating a slight amt. of fluorine only in the extreme neighborhood of the boundary of a core.

**CONSTITUTION:** This optical fiber is constituted by incorporating the slight amt. of F in only the extreme neighborhood of the surface of the core. Since the core constituted of high-purity quartz glass in the greater part of the rest is used, the characteristics of the high-purity quartz glass core are maintained and since the F exists in the extreme neighborhood of the surface of the core, a difference in viscosity in the boundary face between the core and the clad is decreased and the generation of strain at the boundary face is suppressed. An increase of transmission loss is thereby suppressed even at the time of radiation irradiation.

**(54) DEVICE FOR OBSERVING JUNCTURE OF TAPE TYPE MULTICORED OPTICAL FIBER**

(11) 1-107218 (A) (43) 25.4.1989 (19) JP  
 (21) Appl. No. 62-263983 (22) 21.10.1987  
 (71) NIPPON TELEGR & TELEPH CORP <NTT>(1)  
 (72) YOSHIHIKO NOMURA(2)  
 (51) Int. Cl. G02B6/24, G01B11/00, G01M11/00

**PURPOSE:** To measure the misalignment between the respective fibers of tape type multicored optical fiber tapes with good accuracy by projecting the juncture of the above-mentioned optical fibers from two directions diagonally with the tape faces and magnifying and measuring the misalignments of the respective fibers by each piece with the transmission images in the respective directions.

**CONSTITUTION:** An operator drives a driving mechanism 7 by a motor 6 and moves a supporting member 5 toward the left or right while emitting light rays from light sources 1, 2 and observing the images from TV cameras 3, 4. All the optical fibers are then positioned successively by each piece on the visual axes of the TV cameras 3, 4. The images of the juncture in the upper right-lower right directions of the optical fibers can be observed with the TV camera 3 and the images of the juncture in the lower left-upper right directions can be observed with the TV camera 4 at this time. The measurement error of the misalignment is thereby decreased.

10: optical fiber, 11: supporting frame

**(54) OPTICAL FIBER CONNECTING STRUCTURE OF OPTICAL CIRCUIT SUBSTRATE**

(11) 1-107219 (A) (43) 25.4.1989 (19) JP  
 (21) Appl. No. 62-265794 (22) 21.10.1987  
 (71) BROTHER IND LTD (72) HITOMI OTOSHI(2)  
 (51) Int. Cl. G02B6/30, G02B6/12

**PURPOSE:** To minimize the dispersion and loss of the light between an optical fiber and light guide by constituting the title structure in such a manner that the optical fiber can be fixed to the light guide in tight contact therewith.

**CONSTITUTION:** This structure is constituted to connect the optical fiber 1 to a substrate 2 by using a V-groove 3 for guiding the optical fiber 1 and the 2nd groove 4 having perpendicular side faces which constitute incident faces for light. The optical fiber 1 can, therefore, be brought into tight contact with the light guide 6 and the light can be directly projected thereto. The dispersion and loss of the light in the juncture are thereby extremely minimized and the high coupling efficiency is obtd. Since the optical fiber 1 is guided by the V-groove 3, the assembly of the optical fiber 1 to the substrate 2 is easily and inexpensively executed.

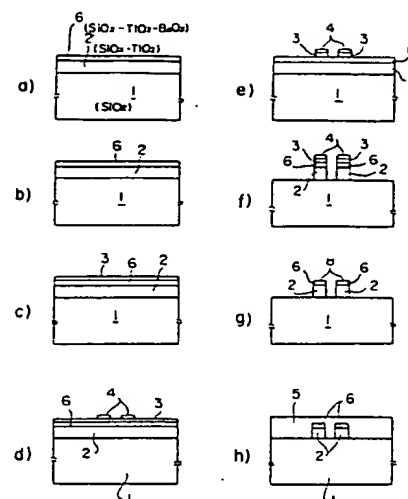

**(54) PRODUCTION OF LIGHT GUIDE**

(11) 2-33106 (A) (43) 2.2.1990 (19) JP  
 (21) Appl. No. 63-181791 (22) 22.7.1988  
 (71) HITACHI CABLE LTD (72) KATSUYUKI IMOTO  
 (51) Int. Cl.<sup>3</sup> G02B6/12, C03C17/34

**PURPOSE:** To suppress the scattering loss at a boundary to a small level by forming a film for a core on a substrate and forming a film for a clad thereon, then patterning the film for the core and forming a film having the same refractive index as the refractive index of the film for the clad over the entire surface.

**CONSTITUTION:** The glass film 2 for the core consisting of an  $\text{SiO}_2\text{-TiO}_2$  system is formed to  $8\mu\text{m}$  and the glass film 6 for the clad consisting of an  $\text{SiO}_2\text{-TiO}_2\text{-B}_2\text{O}_3$  system to  $2\mu\text{m}$  thickness on the quartz glass substrate 1 successively continuously by electron beam vapor deposition. The sample is then heat treated for 3hr in an oxygen atmosphere at  $1,200^\circ\text{C}$  to form the dense films. A  $\text{WSi}_x$  film 3 is then formed on the glass film 6 to  $1\mu\text{m}$  thickness and a photoresist film 4 is applied on the film 3. The desired patterns of the photoresist film are formed and the  $\text{WSi}_x$  film 3 is patterned by dry etching with the patterns as a mask. The glass films 6, 2 are then patterned by dry etching with the patterns of the film 3 as a mask and thereafter, the  $\text{WSi}_x$  film 3 is removed. Finally the surface is coated with the clad layer 5 having the material and refractive index equal to the material and refractive index of the glass film 6 for the clad.

8: upper surface of clad layer

**(54) WELDING CONNECTION DEVICE FOR OPTICAL FIBER**

(11) 2-33107 (A) (43) 2.2.1990 (19) JP  
 (21) Appl. No. 63-184274 (22) 23.7.1988  
 (71) FUJIKURA LTD (72) HIROSHI ISHII(1)  
 (51) Int. Cl.<sup>3</sup> G02B6/255

**PURPOSE:** To reduce the connection loss and to improve the reliability of a connecting part by providing a filter that cuts a light beam which radiates from the vicinity of an end part of an optical fiber on an optical aligning device.

**CONSTITUTION:** End parts of two optical fibers 11, 12 are placed in V-blocks 21, 22, respectively, tip parts of the fibers 11, 12 are illuminated by lighting equipments 31, 32, and images of the end parts are magnified by magnifying glasses 51, 52 through filters 41, 42 and formed on image receiving faces of TV cameras 61, 62. Subsequently, images from two directions are reflected on a screen of a TV monitor (not shown in the figure). Even when a light beam propagates in the optical fibers 11, 12 and its light beam radiates from the vicinity of the end part, the radiated light beam is cut by the filters 41, 42, it is an undesirable influence on a core image formed through the magnifying glasses 51, 52 by the radiated light beam can be obstructed, and accordingly, the core image can be picked up clearly, and it can be executed easily to adjust the optical fibers 11, 12 by moving the V-blocks 21, 22 in the X and the Y directions and to allow them to coincide two-dimensionally.

**(54) CONNECTING METHOD FOR OPTICAL FIBER**

(11) 2-33108 (A) (43) 2.2.1990 (19) JP  
 (21) Appl. No. 63-184275 (22) 23.7.1988  
 (71) FUJIKURA LTD (72) HIROSHI ISHII  
 (51) Int. Cl.<sup>3</sup> G02B6/255

**PURPOSE:** To exactly execute the axial alignment of a core by welding and connecting optical fibers by executing the axial alignment by direct viewing of the core, while bending the optical fibers in the vicinity of a connecting point of the optical fibers.

**CONSTITUTION:** At the time of installing the respective end parts of two optical fibers 11, 12 to be connected, in a setting part 2 of an optical fiber welding and connecting device 1, the optical fibers 11, 12 are bent in the vicinity of a connecting point, for instance, in the vicinity of 200-1,000mm of the connecting point and bend parts 13, 14 are formed. In such a way, since the bend parts 13, 14 are formed, even in case of a state that a light beam propagates in these optical fibers 11, 12, it is obstructed that its light beam reaches a connecting part, and accordingly, a core can be caught clearly by tip images of the optical fibers 11, 12 reflected on a TV monitor screen 3, and while observing said images, the tips of the optical fibers 11, 12 are allowed to coincide two-dimensionally, and they can be welded and connected thereby.

**(54) OPTICAL MEMBER AND ITS PRODUCTION**

(11) 2-37304 (A) (43) 7.2.1990 (19) JP  
 (21) Appl. No. 63-187663 (22) 27.7.1988  
 (71) MINOLTA CAMERA CO LTD (72) HIDEO YASUTOMI(3)  
 (51) Int. Cl<sup>5</sup>. G02B6/00, G02B3/00

**PURPOSE:** To allow the use of an org. material such as plastic to a central optical base material and to easily produce the optical member such as optical fiber the refractive index of which changes continuously by forming an org. plasma polymn. film the refractive index of which changes continuously and which contains at least C, H and O on the surface of the central optical base material.

**CONSTITUTION:** The plasma polymn. film 3 the refractive index of which changes continuously is formed by a plasma polymn. method on the surface of the central optical base material 2 while the polymn. conditions are gradually changed. The continuous production of said fiber is thereby extremely facilitated and the production time is shortened; in addition, the cost thereof is drastically reduced. The formation of the org. plasma polymn. film 3 at a low temp. is enabled by the plasma polymn. method. The degradation in the characteristics of the central optical base material 2 is obviated even of the org. matter such as plastic is used for said material. Moreover, the org. plasma polymn. film 3 contg. the C, H and O has the good adhesiveness to plastic and decreases the exfoliation by bending, etc.

**(54) LIGHT GUIDE AND ITS PRODUCTION**

(11) 2-37305 (A) (43) 7.2.1990 (19) JP  
 (21) Appl. No. 63-187610 (22) 27.7.1988  
 (71) SEIKO EPSON CORP (72) KOJI YAMAZAKI  
 (51) Int. Cl<sup>5</sup>. G02B6/12, H01L27/15

**PURPOSE:** To obtain the light guide in which light can be effectively confined by laminating a clad layer consisting of a group II-VI compd. semiconductor on a substrate and a waveguide layer consisting of a group II-VI compd. semiconductor having the refractive index larger than the refractive index of the clad layer to a part on this clad layer.

**CONSTITUTION:** This light guide has the structure composed of the GaAs substrate 1, the clad layer 2 consisting of ZnS and the waveguide 3 consisting of ZnSe. While the refractive index of the ZnSe of the waveguide 3 is 2.34, the refractive index of the ZnS of the clad layer 2 in the lower part is 2.31 and the refractive index of the upper part is 1.0, the difference in the refractive index is sufficiently large in the direction perpendicular to the boundary. The difference in the refractive index is sufficiently large in the direction parallel with the boundary as well because of the structure in which the waveguide layer 3 having 2.34 refractive index is sandwiched by the atm. of 1.0 refractive index. Since the difference in the refractive index between the waveguide layer 3 and the circumference thereof is large, the confinement of the light in the waveguide layer 3 is effectively executed.

**(54) METHOD OF INSPECTING JUNCTURE OF MULTIPLE OPTICAL FIBER**

(11) 2-37306 (A) (43) 7.2.1990 (19) JP  
 (21) Appl. No. 63-187736 (22) 27.7.1988  
 (71) FUJIKURA LTD (72) TSUTOMU ONODERA(2)  
 (51) Int. Cl<sup>5</sup>. G02B6/255

**PURPOSE:** To allow detection with high accuracy and to allow the normal/defective condition decision of connection with high reliability by irradiating the part near the butt part where coatings are removed with illumination light rays from two directions intersecting orthogonally with each other, detecting the two way components of a axial misalignment by using the two transmitted light images and making inspection.

**CONSTITUTION:** The part near the butt part of the multiple optical fiber F is irradiated with the illumination light rays  $I_1$ ,  $I_2$  from the two directions of, for example, 45° with the plane generated by the bare optical fiber arrays  $f_{1-5}$  led out near said part. The axial misalignment of the multiple optical fiber F is detected and inspected by using the two transmitted light images formed when the above-mentioned rays  $I_1$ ,  $I_2$  pass the fibers  $f_{1-5}$ . All the fiber  $f_{1-5}$  arrays of the fiber F can be observed within one screen in this way; in addition, the objective lens to be used in an image pickup device 1 system may be of a low magnification and the exact detection of the axial misalignment of the outside diameter is possible. The detection of the axial misalignment of the fiber  $f_{1-5}$  arrays from one direction by one time of focal position adjustment is possible as well.

Check-boxes reserved for designating States (for the purposes of a national patent) which have become party to the PCT after issuance of this sheet:

**Precautionary Designation Statement:** In addition to the designations made above, the applicant also makes under Rule 4.9(b) all other designations which would be permitted under the PCT except the designation(s) indicated in the Supplemental Box as being excluded from the scope of this statement. The applicant declares that those additional designations are subject to confirmation and that any designation which is not confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit. (Confirmation of a designation consists of the filing of a notice specifying that designation and the payment of the designation and confirmation fees. Confirmation must reach the receiving Office within the 15-month time limit.)

<b>Box No. VI PRIORITY CLAIM</b>					<input type="checkbox"/> Further priority claims are indicated in the Supplemental Box.
Filing date of earlier application (day/month/year)	Number of earlier application	Where earlier application is:			
		national application: country	regional application: * regional Office	international application: receiving Office	
item (1) 18.03.98	10-68596	JAPAN			
item (2)					
item (3)					
<input checked="" type="checkbox"/> The receiving Office is requested to prepare and transmit to the International Bureau a certified copy of the earlier application(s) (only if the earlier application was filed with the Office which for the purposes of the present international application is the receiving Office) identified above as item(s): <u>(1)</u>					
<small>* Where the earlier application is an ARIPO application, it is mandatory to indicate in the Supplemental Box at least one country party to the Paris Convention for the Protection of Industrial Property for which that earlier application was filed (Rule 4.10(b)(ii)). See Supplemental Box.</small>					
<b>Box No. VII INTERNATIONAL SEARCHING AUTHORITY</b>					
<b>Choice of International Searching Authority (ISA)</b> <small>(if two or more International Searching Authorities are competent to carry out the international search, indicate the Authority chosen; the two-letter code may be used):</small>		<b>Request to use results of earlier search: reference to that search (if an earlier search has been carried out by or requested from the International Searching Authority):</b>			
ISA /_JP		Date (day/month/year)      Number      Country (or regional Office)			
<b>Box No. VIII CHECK LIST; LANGUAGE OF FILING</b>					
This international application contains the following number of sheets: request :4 description (excluding sequence listing part) :34 claims :16 abstract :1 drawings :26 sequence listing part of description : <b>Total number of sheets</b> :81		This international application is accompanied by the item(s) marked below: 1. <input checked="" type="checkbox"/> fee calculation sheet <input checked="" type="checkbox"/> paper with patent stamp equivalent to the fee <input checked="" type="checkbox"/> paper proving fee was paid to the International Office Account 2. <input type="checkbox"/> separate signed power of attorney 3. <input type="checkbox"/> copy of general power of attorney; reference number, if any: 4. <input type="checkbox"/> statement explaining lack of signature 5. <input type="checkbox"/> priority document(s) identified in Box No. VI as item(s): 6. <input type="checkbox"/> translation of international application into (language): 7. <input type="checkbox"/> separate indications concerning deposited microorganism or other biological material 8. <input type="checkbox"/> nucleotide and/or amino acid sequence listing in computer readable form 9. <input checked="" type="checkbox"/> other (specify): priority document mailing request			
<b>Figure of the drawings which should accompany the abstract:</b> 14		<b>Language of filing of the international application:</b>			
<b>Box No. IX SIGNATURE OF APPLICANT OR AGENT</b>					
<small>Next to each signature, indicate the name of the person signing and the capacity in which the person signs (if such capacity is not obvious from reading the request).</small>					
KOBAYASHI Masaharu					

For receiving Office use only
